Podkarpackie Centre for Regional Surveys

Polish Official Statistics

Official statistics is an essential element in the information system of a democratic society, providing the state authorities, public administration and local government, the business sector and the public official statistics on the economic, demographic, social and natural environment.

The legal basis for its activity is the law dated 29 June 1995 on official statistics (Journal of Laws of 2016 item 1068, as amended).

Official statistics is a system of:

- collecting of statistical data,
- gathering, storing and generalising of the collected data,
- announcing, providing and disseminating of the results of statistical surveys as the official statistical data.

The official statistics shall provide **reliable, objective** and **systematic** information for the society, the state and public administration bodies and economic entities on the economic, demographic and social situation and natural environment.

Official statistics services shall consist of the President of the Central Statistical Office, directors of statistical offices subordinate to him or her and other units referred to in Article 27 and 29.

The responsibilities of the Official Statistics shall include:

- recognising the demand for statistical information and analyses, coordinating activities, and preparing a draft programme of statistical surveys of official statistics and presenting it to the Council,
- organising and conducting statistical surveys and determining their methodology,
- collecting, gathering and handling statistical data and their analysis including the annual preparation and publication of the National Health Account in the "Monitor Polski", Official Journal of the Republic of Poland,
- conducting censuses,
- statistical data storing,
- developing standard classifications, nomenclatures and definitions of major categories, determining correspondence between them and their interpretation,
- making available and disseminating statistical information, including major figures and indicators,

- preparing and announcing demographic forecasts and statistical economic and social forecasts,
- presenting to the President, the Parliament (Sejm and Senate), State administration agencies, the Supreme Chamber of Control (NIK), the National Bank of Poland, units of local authorities and other governmental institutions, statistical information in the scope, dates and forms specified in the programme of statistical surveys,
- maintaining national official registers: business entities of the national economy and the register of the territorial division of the country,
- conducting statistical surveys and analyses resulting from the international obligations undertaken by the Republic of Poland,
- conducting statistical international comparisons and announcing their results,
- satisfying the obligation to submit statistical data to international organisations undertaken by the Republic of Poland,
- co-operation with the international and regional organisations specialising in statistics, as well as the agencies and offices of other countries,
- conducting research and development activities in the field of the methodology of statistical surveys, classification standards and the application of mathematical and computing methods in statistics,
- conducting training courses and upgrading knowledge in the field of statistics,
- promoting knowledge about statistics.

The final statistical information are:

- announced on the website (stat.gov.pl) and published in publications of the Central Statistical Office and statistical offices, including statistical yearbooks, as well as - after consultation with the President of the Central Statistical Office - in publications of other bodies conducting statistical surveys,
- published in the "Monitor Polski", Official Journal of the Republic of Poland if a specific provision provides for that,
- announced in the mass media,
- available in other forms than those mentioned above.

These tasks can be achieved because the system of official statistics is characterised by a very vast and diverse subjective and objective range of data collected and the possibility of obtaining information from other state information systems, i.e. from data collected and stored by government bodies and local government authorities, other government agencies, bodies maintaining official registers and the National Polish Bank.

The basic task, which is to provide reliable and objective statistical information, is fulfilled by carrying out statistical surveys covering all economic and social activities.

The programme of statistical surveys is determined by the Council of Ministers at the request of the Statistical Council, which is an advisory body in the field of statistics and acts by the Prime Minister.

Statistics in Podkarpackie Voivodship

In Podkarpackie Voivodship the main tasks of official statistics are performed by Statistical Office in Rzeszów.

Statistical Office in Rzeszow acts on the basis of:

- the law dated 29 June 1995 on official statistic (Journal of Laws of 2016 item 1068, as amended),
- the statute of the Statistical Office in Rzeszów annexed to the instruction No. 17 of the President of the Central Statistical Office dated 13 November 2012 on detailed scope of tasks and organization of the Statistical Office in Rzeszów (CSO Office Journal of 2012, item 51 and of 2014 item 54);
- Organizational Regulations of the Office introduced by the instruction No. 23 of the Director of the Statistical Office in Rzeszow dated 29 November 2013.

According to the above documents the main tasks of the Statistical Office in Rzeszów include:

- in Podkarpackie Voivodship:
 - organization and conduct of statistical surveys, including national censuses,
 - collection, gathering, storage and elaboration of data for statistical surveys conducted according to the programme of surveys of official statistics,
 - dissemination and popularization of information received in surveys of official statistics, including basic figures and indices,
 - keeping national official registers:
 - REGON - units of the national economy,
 - TERYT - territorial division of the country.
- performing specialist national tasks, which are performed by centres operating in the office, within the framework of work conducted for official statistics as a whole:
 - carrying out surveys in the field of sport and tourism statistics, market materials and fuel and energy statistics and cross-border areas and Euroregions,
 - coordination of the work of the statistical offices in the field of surveys on cross-border areas and statistics of Euroregions,
 - participation in international cooperation in the field of statistics for Euroregions, in particular organization of joint statistical surveys and developing and issuing publications on the Carpathian Euroregion,
 - cooperation with units of government and self-government authorities, institutions and universities in designing surveys and statistical studies, as well as cooperation in this field with the appropriate organizational unit of CSO,
 - preparation of information and collective publication of territorial cross-sections,

- carrying out works on the use of administrative data sources,
- development of national collections and preparation of nationwide tables as well as conducting project-development work within the extent specified separately by the President of the Central Statistical Office.

Branches of official statistics in Podkarpackie Voivodship

The Statistical Office in Rzeszów performs its duties both at the Office in Rzeszów, as well as in [Branches](#):

Branch in Krosno	Branch in Tarnobrzeg	Branch in Przemyśl
ul. Bieszczadzka 5 38-400 Krosno phone 13 436 29 32 fax 13 436 31 81 e-mail: SekretariatKRO@stat.gov.pl	ul. Wyspiańskiego 12 39-400 Tarnobrzeg phone 15 822 99 41 fax 15 822 99 40 e-mail: SekretariatTNB@stat.gov.pl	ul. Katedralna 5 37-700 Przemyśl phone 16 678 33 62 fax 16 678 33 62 e-mail: SekretariatPRZ@stat.gov.pl

Branches carry out the following duties:

- collect and compile statistical reporting under Office specialization,
- provide statistical data, information and assistance in clarifying specific issues,
- register entities in REGON register in the section on Podkarpackie Voivodship,
- carry out work for the purpose of updating TERYT register in the section on Podkarpackie Voivodship,
- cooperate with the local self-government administration and institutions within their range of activities,
- carry out surveys in Podkarpackie Voivodship,
- participate in the implementation of censuses and other comprehensive surveys.

Centre for Sport and Tourism Statistics

The centre carries out nationwide tasks in the field of sport and tourism statistics. They are fulfilled through the acquisition and analysis of data on the distribution and occupancy of tourist accommodation establishments by Poles and foreign tourists, activity of sport clubs in Poland, people practising sport and training staff, activity of Polish sports associations and organizations of physical culture as well as sports infrastructure.

In particular, the centre is responsible for:

- providing interested units with statistical data on sport and tourism,
- participation in the preparation of methodology, organization of surveys and studies in the field of sport and tourism statistics,
- substantive supervision and coordination of nationwide surveys on sport and tourism as well as cooperation with the relevant departments of the Central Statistical Office in this regard,
- preparation of publications and statistical analysis and other forms of presenting final information about sport and tourism statistics,
- creation and administration of Knowledge Database "Tourism, sport and leisure",
- recognizing the needs for statistical information in the field of sport and tourism statistics,
- participation in the development of the programme of statistical surveys in the field of sport and tourism statistics,
- cooperation with domestic and foreign institutions dealing with sport and tourism statistics.

<http://rzeszow.stat.gov.pl/osrodki>

Centre for Materials and Fuel Energy Market Statistics

The aim of the Centre is the realization of nationwide tasks in the field of materials and fuel energy market statistics, and recognizing the demand for statistical data in this area. These tasks are fulfilled through the acquisition and analysis of data on: management of basic metallic and non-metallic waste suitable for recycling, consumption and stocks of selected materials, the settlement of the energy conversion process, the balance of electricity and heat in steam and hot water, heating infrastructure and heat trade, heat production, heat from renewable sources, gas network infrastructure, number of clients and sales of natural gas.

In particular, the centre is responsible for:

- initiation and preparation of methodology and conduct of statistical surveys in cooperation with CSO,
- participation in producing results and nationwide analysis and compilation of publications,
- cooperation with public authorities, institutions and universities in the preparation of surveys and statistical studies,
- participation in national and international conferences and seminars,
- establishing and administering Knowledge Database "Fuel and Energy Economy".

<http://rzeszow.stat.gov.pl/osrodk>

Centre for Transborder Areas and Statistics for Euroregions

The centre is responsible for conducting research on socio-economic processes in border areas and statistics for Euroregions. It carries out works on creating a coherent research system for cross-border areas. In addition, the Centre implements nationwide survey the field of travel, i.e. "Trips of non-residents to Poland. The movement of vehicles and people on the Polish border with the European Union countries" and "Participation of Polish citizens (residents) in travel". The Centre comprises a separate department in its structure - Methodology and Integrated Surveys in Travel Division.

In particular, the centre is responsible for:

- identifying, analysing and taking actions to meet the demand for statistical;
- initiating, programming and planning of statistical surveys;
- developing the methodology of surveys;
- preparing guidelines for IT systems for collecting, processing, analysing and compiling final data and participation in testing of systems;
- creating and maintaining databases of final statistical data;
- preparing publications according to the statistical analyses and publishing plan;
- conducting methodological work;
- improving research tools used and the methodology in order to improve the quality of research and the reduction of costs and the burden of respondents;
- monitoring of changes in national and international legislation, conducting work aimed at aligning research to the applicable legal requirements;

- identifying and evaluating the usefulness and usability of administrative and extra-administrative data for the purposes of official statistics;
- cooperation with other institutions and organizations in order to integrate and coordinate statistical surveys and data acquisition, including participation in the work of inter-department teams and expert groups.

<http://rzeszow.stat.gov.pl/osrodk>

Podkarpackie Centre for Regional Surveys

The Centre is responsible for tasks related to the development and dissemination of information and analysis characterizing the socio-economic situation of Podkarpackie Voivodship. In addition, it provides active information support for local governments, the media and other parties, as well as disseminates and makes available the results of statistical surveys, runs the Information Centre and promotes official statistics. One of its tasks is also to recognize the need for statistical data taking into account the issues that are relevant from the point of view of the region. The structure of the centre comprises Mathematical Statistics Division.

In particular, the centre is responsible for:

- analysis of information needs of the users and identification of the demand for data, studies and statistical analysis;
- information services of government and self-government authorities;
- providing the public institutions with statistical information in the scope, dates and forms specified in the programme of statistical surveys;
- sharing and dissemination of statistical information, which are the official data obtained from statistical surveys of official statistics;
- carrying out individual orders for unpublished statistical data;
- promotion of statistics and dissemination of knowledge about statistics;
- cooperation with scientific and research institutes and other institutions conducting regional research and analysis;
- cooperation with the regional mass media;
- running Information Centre and the Office library;
- maintaining and updating the website of the Office.

In addition, Podkarpacie Centre for Regional Surveys runs an official US account on [Twitter](#), where content for new events, latest news and publications, as well as new products and applications are published.

Moreover, under the action "From the nursery school to the schoolboy" Podkarpackie Centre for Regional Surveys conducts educational activities aimed at nursery schools and schools. Employees of the office familiarize children and young people with issues concerning official statistics and work of statisticians.

Podkarpackie Centre for Regional Surveys also organizes meetings and workshops aimed to representatives of local authorities, the media and universities. These classes aim to familiarize them with the resources of official statistics, available databases and their functionality. Participants are capable of generating data sets by their own, as well interpreting them properly.

Dissemination of statistical issues and familiarization with the activity of the Statistical Office in Rzeszow also take place on the basis of the organization of Open Doors Day or the Educational Competition "Masters of Statistics".

REGON Register

National Official Business Register (REGON) was established on ground of article 41 point 1 position 1 of the Law dated June 29th, 1995 on official statistics (Journal of Laws 2016, position 1068, as amended). Detailed rules for running and updating of the register are defined by the Regulation of the Council of Ministers of July 27th, 1999 on the mode and methodology of running and actualisation of business register, including application, questionnaire and certificate specimens and detailed conditions and mode of cooperation of official statistics services with other bodies running official registers and information systems in public administration (Journal of Laws from, position 2009, as amended).

REGON register is a continuously updated set of information on subjects of national economy run as an IT system in the way of central database and local databases.

REGON register:

- serves reaching identification cohesion of businesses entered into another official registers and information systems of public administration,
- serves uniformity of descriptions used in nomenclatural and classification concepts in all official registers and information systems of public administration,
- provides general characteristics of businesses operating in national economy in following cross-sections: territorial, proprietorial, types of activity, legal form, etc.,
- enables preparation of address list of active businesses,
- is the foundation for creation of databases and data banks on businesses,
- is the main source of supply for the base of units drawn for statistical surveys.

The entry into the REGON register is obligatory for all:

- legal persons,
- organizational units without the status of a legal person,
- natural persons running business activities (including private farms),
- local branches of businesses mentioned above.

Each entity receives a unique ID number - REGON.

A business of the national economy has to register its business activity in the National Official Business Register REGON – art. 42 section 5 of the Act on official statistics (Journal of Laws of 2016, item 1068, as amended).

Entry or change of entry in the REGON register of entrepreneurs who are natural persons is made on the basis of data from the application for entry in the Central Registration and Information on Business (CEIDG) that the entrepreneur makes through the electronic form available on the CEIDG website, in the Public Information Bulletin of the minister responsible for the economy and through the electronic platform of public administration services ePUAP. The application for entry into CEIDG may also be submitted in person by the entrepreneur in the selected gmina office or sent by registered mail. CEIDG sent to the CSO relevant data contained in the application for entry into CEIDG necessary to acquire, change or delete an entry in the National Official Business Register REGON.

For other groups of businesses of the national economy the following rules for application to the REGON register are obligatory.

Entry or modification of the entry in the REGON register of **entities registered in the National Court Register**, with the exception of Register of Insolvent Debtors and entities referred to in Art. 49a Section 1 of the National Court Register, is made on the basis of data submitted to the REGON register electronically from KRS, and in the scope of supplementary data mentioned in Art. 42, Section 3a, Item 2 of the Act on official statistics – from CRP KEP.

According to the law entrepreneurs should apply at the appropriate statistical offices only if:

- an application concerns amendments not covered by an entry in CEIDG, i.e. change in the number of employees and workers, an entry of the local unit not covered by CEIDG – e.g. activity of a farm (with the possible authorization for the person who submits the application on behalf of the entrepreneur - if, in accordance with Art. 32 of the Act of June 14, 1960, the Administrative Procedure Code (Journal of Laws of 2017, item 1257) the entity operates by proxy);
- an application for registration is submitted by a capital company within the organization - according to the wording of Art. 14 Section 4 of the Act of 19 December 2008 on amending the Act on freedom of economic activity (...) - capital company may undertake business activity before obtaining an entry in the Register of Entrepreneurs;
- they claim a valid certificate of the REGON identification number.

Entry or change of entry in the REGON register of a business of the national economy which is not an entrepreneur is made:

- for schools and educational institutions on the basis of data transferred from the database of Education Information System (SIO) to the REGON register,
- for other businesses on the basis of the RG-OP or RG-OF form.

The RG-OP or RG-OF form should be submitted to the statistical office or its branch in the voivodship, in which:

- legal person or organizational unit without legal personality has its seat,
- natural person running economic activity not subject to the Central Registration and Information on Business resides.

In accordance with the Art. 42 item 6 of the law on official statistics a business is required to submit the appropriate application within 14 days from the occurrence of the circumstances justifying the entry, change or deletion from the REGON register.

Information on the REGON identification number given to an entity is available in the search engine of entities of the national economy on the website of the Central Statistical Office.

<http://stat.gov.pl/en/> → REGON

TERYT Register

National Official Register of the Territorial Division of the Country (TERYT) functions on ground of The Law of June 29th, 1995 on official statistics (Journal of Laws from 2016, item 1068, as amended) and the Regulation of the Council of Ministers of December 15th, 1998 on detailed principles of running, using and making available the territorial register and related to it obligations of the state administration agencies and the self-government entities (Journal of Laws from 1998 No 157, item 1031, as amended).

TERYT register covers the systems of:

- identifiers and names of units of territorial division TERC,
- identifiers and names of localities SIMC,
- statistical regions and census enumeration areas BREC,
- identification of addresses of streets, real estates, buildings and dwellings NOBC,
 - Central Catalogue of Streets ULIC.

The system of identifiers and names of units of territorial division TERC

contains identifiers and names of the units of the fundamental three-tier territorial division of the country and is built according to hierarchical numbering:

- voivodships,
- powiats,
- gminas.

The system of identifiers and names of localities SIMC covers:

- official name of locality,
- identifier of locality,
- official type of locality,
- voivodship, powiat and gmina in which the locality is situated together with the indication of belonging to the basic locality, in the case of non-independent localities which constitute an integral part of another locality.

System of statistical regions and census districts BREC

covers identifiers and borders of units of division for conducting national censuses and sample surveys;

- the census circuit is a spatial unit separated for censuses and other statistical surveys according to the number of dwellings and inhabitants,
- the statistical region is a spatial unit of aggregation of statistical data composed of several, no more than nine, census circuits.

The system for address identification of streets, real estates, buildings and dwellings NOBC

contains addresses of buildings and dwellings, in the layout of statistical regions and census circuits.

The system of address identification of streets, real estate, buildings and dwellings NOBC includes the **Central Catalogue of Streets ULIC**, which covers street names in accordance with the wording of the resolutions of gmina councils on their assignment, name identifiers and affiliation of streets to voivodship, powiat, gmina and town.

TERYT register is updated at the following frequency:

- systems: identifiers and names of territorial division units, identifiers and names of localities, the Central Catalogue of Streets, as well as the system of address identification of streets, real estate, buildings and dwellings in terms of locality and street names and ordering of real estate and buildings - on a regular basis;
- the system of statistical regions and census circuits and address identification of streets, real estate, buildings and dwellings in terms of:
 - new arriving and falling buildings and dwellings - quarterly,
 - division into statistical regions and census circuits - at least once a year.

<http://stat.gov.pl/en/> → TERYT

Dissemination of statistical data

In accordance with Official Statistics Act of 29th June, 1995 (Journal of Law of 2016, item 1068, as amended), official statistics guarantees **equal, indiscriminatory** and **simultaneous** access to statistical information, in particular to basic figures and indexes.

All results of statistical surveys conducted in accordance with the programme of statistical surveys of official statistics are **official statistical data**, regardless of who conducts them. All units conducting surveys in scope of official statistics law apply mandatory classification standards and submit survey results to the official statistical services and, acting in consultation with the President of the Central Statistical Office, international organizations.

Information and data collected in official registers and information systems of public administration are considered **administrative data**. Data concerning phenomena, events, objects and activity of entities of the national economy, as well as life and status of natural persons, including personal are **statistical data**.

Distinguishing between the concepts of **administrative data** and **statistical data** is important in terms of the possibilities, ways and purposes of using both types of data.

Taking into account the possibility of identifying an entity or a person, statistical data are divided into identifiable individual data and non-identifiable individual data.

Identifiable individual data are statistical data containing the information concerning a specific entity of the national economy or a natural person, directly identifying said entity or person according to the name, given name and surname, address or publicly accessible identification number, as well as enabling to directly identify said entity or person using other means than the ones allowing for direct identification, excluding the means requiring excessive costs, time or actions.

Non-identifiable individual data are statistical data containing the information concerning a specific entity of the national economy or a natural person, not enabling to either directly or indirectly identify said entity or person.

Identifiable individual data collected in statistical surveys of official statistics **shall be subject to absolute protection**. The data may be used exclusively for statistical calculations, compilations and analyses, and for creating a frame for statistical surveys, which is made by the President of the Central Statistical Office. Making these data available or using them

for purposes other than those specified in the law is prohibited - this principle is classified as **statistical confidentiality** and it is **one of the basic principles of statistics**. The violation of the principle is subject to the penalty of imprisonment for up to 3 years.

Using statistical data with which a person has familiarised himself/herself in connection with performing work or activity as requested by the entity conducting statistical survey of official statistics, to obtain material or personal gain shall be subject to imprisonment up to 5 years.

Identifiable individual data may not be used for any other purposes, namely, e.g. to undertake any decisions concerning relevant entities, to confront data with tax and control documentation.

One may not publish or made available statistical data which were obtained in statistical surveys and which can be linked to or can identify a specific natural person, as well statistical information and data characterising economic and financial results of entities of the national economy conducting economic activity, if the given aggregated data consist of less than three entities or the share of one entity in a specific compilation is higher than the three-fourths of the total. Exceptions are possible, provided that the person authorised to represent the entity expressed consent for publishing these data.

The informational scope of statistical surveys is defined by the Council of Ministers on an annual basis by a regulation introducing the programme of statistical surveys for each subsequent year. The same legislation determines the form and availability date of final statistical information.

The official statistics services can conduct at individual requests statistical surveys not covered by the programme of statistical surveys of official statistics and perform additional compilations and analyses on commission, using the data collected in the surveys of the programme of statistical surveys of official statistics for this purpose.

Dissemination of statistical information in the Statistical Office in Rzeszów is carried out by the Podkarpackie Centre for Regional Surveys and Information centres in Rzeszów, Krosno, Przemyśl, and Tarnobrzeg.

 - unpublished statistical data from SO databases,
 - compilation of studies on the basis of information published by CSO.

BANK DANYCH LOKALNYCH

Local Data Bank (BDL) is the Poland's largest organised collection of information regarding social, economic and demographic situation and environment condition, describing country, voivodships, powiats, gminas, statistical localities as well as regions and subregions constituting elements of the nomenclature of territorial units for statistics (NTS).

BDL gathers, systematically completes and updates statistical information on specific individual territorial units. It provides continuous, user-friendly access to up-to-date statistical information.

It allows multidimensional statistical analyses in **regional and local systems**. BDL resources are made available on the Internet free of charge.

Available systems of **spatial identification**: according to units of the National Official Register of the Territorial Division of the Country (TERYT) and in the system of the nomenclature of territorial units for statistics (NTS).

BDL covers annual (since 1995 to 2016) and short-term data (i.e. monthly, quarterly and six-month for the years 2005–2017).

The users of the Bank may obtain information from a given field of statistics in the long time series (in tabular form, or as graphs) and a comprehensive description of selected unit of administrative division of the country.

BDL provides glossaries and metadata describing methodological context of the content information, including the list of features, a list of territorial units of the country with history of changes, glossary of statistical terms, description of the principles of data aggregation, measurement units and attributes of variables.

The login option enables interested recipients maintenance to keep their individual libraries of the tabular presentations.

<https://bdl.stat.gov.pl>

Knowledge Databases (DBW) cover a very wide range of areas, among others, national accounts, demography, results of activity of enterprises, industry, construction, trade, transport and communications, business tendencies, labour market, prices, health, living conditions, agriculture, nature or environmental protection.

The analytical platform used allows for an arbitrary adjustment of the data range to the needs of the user and thus for easy transition from the data level to the level of information, followed by knowledge and decision.

Knowledge Databases also provide the opportunity to visualize data in the form of tables, charts and maps, as well as to download and use them within own studies and analyses.

DBW are characterized not only by the easiness of access to statistical data and solid base for decision-making. Each data set is supplemented with appropriate metadata, links, publications recommended, conferences and statistical titbits.

<http://swaid.stat.gov.pl>

STRATEG is a system created by the Central Statistical Office for programming and monitoring of development policy. The database contains a comprehensive set of key measures to monitor the implementation of strategies in Poland (at the national, regional and voivodship level) and in the European Union (Europe 2020 strategy). In addition, the system provides statistical data relevant for cohesion policy implementation. Figures are supplemented by definitions and methodological information as well as reports and thematic analyses. Together with the rich database STRATEG offers functional tools to facilitate the analysis of phenomena in the form of charts and maps.

<http://strateg.stat.gov.pl>

Geostatistics Portal is a modern solution for the cartographic presentation of data obtained in censuses, namely the Agricultural Census 2010 (PSR 2010) and the Population and Housing Census 2011 (NSP 2011) and also from the Local Data Bank.

It is designed to:

- collect
- present
- provide information to a wide audience, including public administration, entrepreneurs, individual users and research institutions.

This comprehensive solution is tailored to European standards, and all data, by way of processing, is presented in a depersonalised form, preserving statistical confidentiality.

Data is presented using various cartographic presentation methods such as:

- choropleth maps,
- diagram maps.

SYSTEM
EDUKACYJNY

The **Education Portal** was created for all those interested in deepening their knowledge of official statistics. Users can find out what official statistics is about, what data are collected, how they are processed and shared. The content of the tabs has been set up in an accessible way to reach groups of people of all ages. Attractive complements to educational materials include games, which help you understand the presented issues. Users will also find reports on educational events conducted by the CSO and the Statistical Offices, open days, workshops and competitions for children and youth or student training. Educational Portal also provides information about the Statistical Olympics, which took place in the school year 2016/2017.
